I'm trying to do is to edit a form with just one or many questions with radio button, and when I check one of the radio buttons appear the one that I have selected and also have the check. I'm ok with the values that I have in input that I have in the code, but with the radio button that I have not already entered, they do not have names. I've followed a tutorial that has this example and I have copied all the code. What I want is: to be able to do the radio buttons appear and make a check e79caf774b

A: People tend to think that you have a corrupted file but I can imagine a number of other causes and the best approach is to attempt to repair your file using a recovery program for Autocad. The project file format is highly complex and the documentation for repairing damaged files is extensive.

To open a project file in Autodesk Inventor 2010 you can do the following: From the File menu, choose Open. In the Open dialog box, choose File > Open and then browse to the file. (Press Ctrl+O to open the Open dialog box.) Select the file, and then click Open. Source I would suggest using a recovery program for Autocad and to do a repair using the instructions there. Q: How to get a pointer of the each element in the array? I have an array like this: `int *arr = {3, 4, 5, 6, 7, 8, 9, 10};` And I want to get a pointer of each element of this array and insert each pointer into some structure. `void *ptr = arr;` I can get a pointer of the first element of the array but not the rest. Thanks. A: `arr` is simply an `int*`. So you can't change its value but you can easily dereference it and get the integer it points to. Note that this is not enough, since you can also have a structure with pointers to elements of that array. You also need to know the offset at which the pointer to the data pointed to by the pointer of the first element of the array is stored, since an array can be accessed through several indexes, e.g. as `arr[0]` or `arr[5]`. `void *arr = (void *)&a[0];` This is a simple way to access the data through a void pointer, i.e. without the need for the element type. Q: Transfer from one language to another? I'm looking for a way to improve my English and I'm wondering if it would be possible to transfer some knowledge of my favorite language, say, French, to another language, say, English. The idea being that it would be a good way for me to absorb more English vocabulary and structures. What would you say would be the best way to go about this? Specifically, I'm going to start doing this through listening
