A good start. After upgrading to CS6, Lightroom has been running great. Now, it looks like there are some bugs in the Reader/Refresh Processing plugin, and that many resources don't fully load for updating. As such, I decided to give Lightroom 5 a try for the first time (also updated one of my external drives to 5.5). Love the photo browser now -- it's so much faster and easier to navigate. I still believe the most powerful feature in Lightroom is NVIDIA(R) GPU(TM) acceleration, and in this version it's still greatly improved. Lightroom for Windows still hit 1GB in memory usage for the first time. Adobe has also greatly improved the import and speed of using Lightroom. Now, I am all Lightroom. Let's get started. Just to clear things up, in Lightroom 5 Adobe added the ability to choose from a variety of settings (like text size) for import, rather than having to choose a preset that you dislike later (like 150% or in Lightroom's case, the standard size). However, this did not fix the "slow" import speed that I still see when I scrape the memory usage. Lightroom 5's refresh feature is great, and I recommend trying it out. You can also drag and drop

images directly into categories in the import window which can be very useful sometimes. The auto white balance does a very good job. I'm still not sure that I like the "stickers" selection from Lightroom 5, but I will keep experimenting with it. Lightroom doesn't need Adobe Portfolio (I still use it, even with Lightroom). I updated and I still like the way Lightroom works and know it will be even more so after Lightroom 4's "enhancements" like the "optical flow" feature and direct bookmarks are added. However, from an end user's perspective, there are some major changes that they are now also making in Lightroom that I don't like. For example, Adobe recommends exporting your files "as a web-ready file in Photoshop" (which in other words means, "support only formats that are packed in a ".psd" container"). I have a royaltyized product (AMACS) and the recommendation is not to export files at all. If users need their files to be more portable, then it should just be easier for them to use a higher resolution/format that is a better choice than the ones for web that Adobe used to recommend. I do like the video exporting function, but it would be better if it was self-contained and not an addon to Photoshop
